South Carolina Public Utilities Commission

We are citizens of South Carolina with our home located in Mount Pleasant SC. We have been paying monthly fees for electricity to SC E&G for the past 30 years. We are opposed to paying SC E&G in the future for the nuclear plant that was a failure in its development and completion.

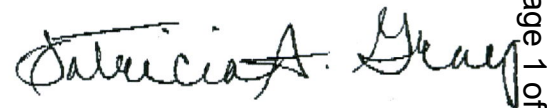

We learned from the media that private contractors involved in the building of the nuclear reactor walked away with large sums of money that they received from SC E&G and Santee. We have observed an increase in the monthly fee that we were charged for electricity and we were told that this increase was due to the cost of building the nuclear reactor. Now that this nuclear facility has failed and been closed for development, we expect a reduction in the monthly fee that we are charged for electricity.

We learned today in the Post and Courier newspaper that the utilities commission will vote for continued payment by the customers for the cost of the nuclear fiasco. We object to this payment since the failed nuclear plant does not provide anyone with electricity. Please support the citizens who have no benefit from this nuclear disaster in the South Carolina energy industry.

Respectfully Yours,

Timothy K. Gray
